

# Your B3Hub journey starts here!

Welcome to activity-based working at Blacktown Hospital.

Thanks for completing the initial staff survey over the last few weeks. The information you provided will help us plan your transition program next year, and helps us better understand how you work.

Next week, we will be starting the space utilisation survey which will help us design your workpoints.

If you have any questions, please contact us at any time:  
[Robyn.Campbell@health.nsw.gov.au](mailto:Robyn.Campbell@health.nsw.gov.au) or  
[Nathan.Ferguson@health.nsw.gov.au](mailto:Nathan.Ferguson@health.nsw.gov.au)

### What you said in your first staff survey:

- 82% said your primary role is clinical
- You think ABW is about collaboration, mobility, flexibility, space, and productivity
- 77% of you are already paper independent - mostly digital and using paper for reference, which is consistent with our Paper-Lite initiatives
- 74% said mobile access was important
- 62% said some of your work requires you to use paper, which limits paper independence
- 64% said it's important to have space for a break or lunch
- 51% said the workspace design is important
- At this stage you were evenly split on preferring activity-based working to traditional working.

### B3Hub timeline

# Space utilisation study. Yay!

From Monday 23 October, we will be doing a space\* utilisation study for the B3HUB.

The BMDH Project team will be in Allied Health observing which areas are being used and how.

They will not be observing what you are doing, just how you are using the spaces. The data is anonymous and relates to the spaces, not people.

You don't need to do anything differently. Just carry on with business as usual.

So if you see us sitting in Allied Health or walking around taking notes, please say hi.

Thanks for your patience!

\*Not related to the new Australian space agency but we if they are planning activity-based working on the ISS we think we'd be a great case study!
